

New Ravenheat RSF 820/20ET

- New electronic high efficiency combination boiler
- Output 81,000Btu's (23.6kW)
- Controls fully utilise gas input for maximum efficiency both at high and low power outputs
- Maximum efficiency 90.2%
Minimum part load efficiency (30%) 88.7%
- Fully modulating DHW & CH
- Built in anti-cycle device and frost stat
- Domestic hot water flow rate Δt 35°C 9.6l/min
- Maximum temperature 60°C (helps protect against limescale)
- Easy to install
- High level safety and security
- Soft ignition start domestic hot water or central heating
- Multi choice flue options up to 3.5 metres horizontally or 4.5 metres vertically
- Constructed to the highest quality standards with each appliance fully function tested prior to leaving the factory
- Backed by Ravenheat's renowned service response should this be required

Ravenheat have again come up with a combination boiler which offers the end user increased efficiencies, particularly at lower outputs where the heating system is required to operate. This has been achieved by careful design and layout of components to achieve maximum efficiency at all levels of operation, yet still retaining the hallmark of Ravenheat's quality of component.
